Checkpoint	What to Ask the Vendor	Why It Matters
Transparency artifacts	Share the latest Model Card, Data Sheet, and bias metrics for this release.	Confirms the vendor measures subgroup error and documents lineage as required for highrisk systems under EU AI Act Art. 10 on data governance. https://artificialintelligenceact.eu/article/10
Regulatory alignment map	Map your controls to NIST SP 1270, EU AI Act risk requirements, and ISO/IEC 42001 clauses.	Harmonizes their lifecycle controls with the frameworks most auditors use, reducing integration gaps. https://artificialintelligenceac t.eu/article/14
Explainability Interface	Provide an API or dashboard exposing feature-influence (e.g., SHAP) and slice-level metrics on demand.	Let's your risk team interrogate bias drivers and contest individual predictions—an implicit requirement of EU AI Act human-oversight rules (Art. 14) https://artificialintelligenceac t.eu/article/14 Artificial Intelligence Act EU
Independent assurance	Provide a recent SOC 2 report with an AI fairness annex or a TÜV/AIQCP certificate.	External attestation reduces reliance on vendor self-reporting and meets board-level assurance norms. https://www.schellman.com/b log/soc-examinations/how-to-incorporate-ai-into-your-soc-2-examination">https://www.schellman.com/b https://www.schellman.com/b soc-examinations/how-to-incorporate-ai-into-your-soc-2-examination">https://www.schellman.com/b
